SUMMARY

Forward-thinking Computer Science student and Full-Stack Developer specializing in the MERN stack, Cloud infrastructure, and DevOps practices. Proven capability in engineering secure RESTful APIs, automating deployments, and building responsive web applications. Eager to leverage technical skills in a collaborative software engineering role.

OPEN SOURCE EXPERIENCE

Voicey Bill - Open Source Contribution, Contributor

2026 – 2026 | Remote

- **Contributed** to the open-source development of Voicey Bill, focusing on optimizing backend APIs and enhancing system reliability.
- **Collaborated** with international maintainers via Git/GitHub to review code, patch software bugs, and implement new feature requests.
- **Refactored** core code segments to improve execution efficiency and ensure clean, maintainable documentation for future contributors.

EDUCATION

BS Computer Science, University of Education

08/2024 – Present | Lahore, Pakistan

Currently in the 4th semester, maintaining a strong academic foundation in core computer science disciplines including data structures, algorithms, and software engineering.

SKILLS

MERN Stack Developer — Competent

- MongoDB, Express.js, React.js, Node.js, Redux Toolkit, RESTful APIs, Tailwind CSS, JavaScript (ES6+)

Cloud & Deployment — Amateur

- AWS (EC2, S3, IAM), Vercel, Netlify, Render, Heroku, DigitalOcean

DevOps & CI/CD — Competent

- Docker, GitHub Actions, Git/GitHub, Nginx, CI/CD Pipelines

LANGUAGES

- English
- Urdu

PROJECTS

Resume Builder, Interactive AI Resume Builder

03/2026

- **Engineered** a dynamic resume builder allowing users to input professional details and select custom templates.
- **Created** responsive form interfaces in React.js and handled state persistence across multiple steps using React Context.
- **Built** a backend service with Node.js and Express.js to convert user data into downloadable, ATS-friendly PDF formats.
- **Designed** robust validation schemas to ensure text inputs meet standard professional resume guidelines.

E-Shop Platform, Full-Stack MERN E-Commerce Application

01/2026 – 02/2026

- Designed and implemented scalable **RESTful APIs** using Node.js and Express, optimizing database queries in MongoDB.
- Utilized **Redux Toolkit** (or React Context API) for efficient global state management across the application.
- Styled the frontend using **Tailwind CSS** (or Bootstrap) to ensure a seamless, mobile-first user experience.
- Deployed the application using **Vercel**.

MERN Estate, Real Estate Marketplace Application

11/2025

- **Architected** a full-stack real estate marketplace featuring property listings, advanced search filters, and location-based sorting.
- **Integrated** MongoDB to store user profiles, property images, and listings, utilizing Mongoose for data modeling.
- **Implemented** secure image upload capabilities using Firebase Storage (or Cloudinary) with seamless frontend previews.
- **Developed** an in-app messaging feature enabling direct communication between potential buyers and property owners.

ORGANISATIONS

Alkhidmat Foundation, Social Intern(Volunteer)

2026 | Hybrid

- **Collaborated** with a multidisciplinary team to coordinate community welfare programs and distribute essential relief resources to underserved populations.
- **Assisted** in organizing and managing local social development events, ensuring seamless logistics and high community engagement.
- **Leveraged** digital communication tools to help promote foundation campaigns, increasing volunteer participation and public awareness.

PUBLICATIONS

AI Fluency: The Career Skill That Separates Operators from the Obsolete, Dev.to

2026

- **Authored** a strategic technical article analyzing the shift toward AI integration in modern workflows, shifting focus from baseline technical execution to high-level system architectural oversight.
- **Synthesized** industry trends to provide developers with actionable frameworks for leveraging AI tools effectively, enhancing engineering productivity and software design paradigms.
- **Engaged** with the broader developer community by breaking down complex career longevity concepts into highly structured, accessible, and thought-provoking insights.

Selecting Your Frontend Foundation: React vs. Next.js, Dev.to

2026

- **Published** a comparative technical analysis evaluating architectural trade-offs between client-side rendering (React) and server-side rendering/static generation (Next.js).
- **Provided** structural frameworks to assist software engineers in selecting the optimal frontend foundation based on project scale, SEO requirements, and performance parameters.
- **Demystified** core concepts such as hydration, routing strategies, and data-fetching methods to guide the technical community toward scalable web development patterns.
